

Project Proposal

Project Ideas:

How has ai affected different industries specifically in relation to unemployment

1. Data on how AI has affected unemployment
 - a. [QCEW Data Files : U.S. Bureau of Labor Statistics](#)
 - b. 2014, 2024, and 2020 if time allows Annual Data
 - c. Columns to use from U.S Bureau of Labor Statistics Website
 - i. **3 industry_code** - 6-character industry code
 - ii. **6 year** - Year
 - iii. **industry_title**
 - iv. **9 area_title** - Multi-character area title associated with the area's FIPS code (Excluded from singlefile)
 - v. **10 own_title** - Multi-character ownership title associated with the ownership code (Excluded from singlefile)
 - vi. **14 annual_avg_estabs_count**
 - vii. **15 annual_avg_emplvl**- Annual average of monthly employment levels for a given year (head count)
 - viii. **16 total_annual_wages** - Sum of the four quarterly total wage levels for a given year
 - ix. **34 oty_total_annual_wages_chg** - Over-the-year change in the total annual wages for a given year
 - x. **35 oty_total_annual_wages_pct_chg** - Over-the-year percent change in total annual wages for a given year (Rounded to the tenths place)
 - xi. **20 avg_annual_pay** - Average annual pay based on employment and wage levels for a given year.
 - xii. **42 oty_avg_annual_pay_chg** - Over-the-year change in average annual pay for a given year
 - xiii. **43 oty_avg_annual_pay_pct_chg** - Over-the-year percent change in average annual pay for a given year (Rounded to the tenths place)
 - xiv. **32 oty_annual_avg_emplvl_chg** - Over-the-year change in annual average employment for a given year
 - xv. **33 oty_annual_avg_emplvl_pct_chg** - Over-the-year percent change in annual average employment for a given year (Rounded to the tenths place)
 - xvi. **percent employment change from 2014 to 2024** - make column
 - xvii. [Adjust for inflation to 2026 for all dollar values](#)

on hours worked or bonuses. 

Annual Wage (Salary)

- **Definition:** A fixed, set amount of money guaranteed for the year.
- **Structure:** Paid in regular, consistent increments (e.g., monthly or bi-weekly).
- **Characteristics:** Usually for exempt, full-time professional positions.
- **Focus:** Base compensation; often excludes bonuses or additional perks.  Red

Annual Pay (Total Compensation)

- **Definition:** The total, combined value of all financial compensation and benefits received over the year.
- **Components:** Includes base wage/salary, bonuses, overtime, commission, health insurance, and paid time off.
- **Characteristics:** Reflects the full value of the employment package.
- **Focus:** Overall earnings, often variable based on performance or hours.  Indeed SG +4

- b. Prompt: give me articles on the effect of AI on Management of Companies and Enterprises employment trends from 2014 to 2024?
- c. Summary:

6. Software Publishers 5132

- d. Background Sourcing <https://scispace.com/>
 - i.
 - ii. Related studies - scispace Significance
- e. Challenges
 - i. 1. Finding significant data
 - ii. 2. Finding Data on AI Implementation in chosen Job Sectors
 - iii. 3. Finding data from both 2014 & 2024
- f. Approaches and strategies
 - i. Use the data sets from 2014 and 2024 provided by the United States Labour of Statistics. **We will take that data and analyze**

An aim statement in a research proposal is a concise, clear, and explicit summary of the primary goal, purpose, or intended outcome of the study. It defines what the research aims to accomplish, often in a single sentence or paragraph, guiding the research focus and providing a vision of success. It frequently outlines the "what," "how," and "why" of the investigation. 📌

Key Aspects of an Aim Statement:

- **Purpose:** It identifies the overarching goal of the study.
- **Structure:** It is often a brief, direct statement positioned at the beginning of a proposal's introduction or specific aims section.
- **Components:** It often describes the specific area of investigation, the population or subject, and the anticipated outcome.
- **Relationship to Objectives:** While the aim is the general goal, specific objectives are the actionable steps taken to achieve it. 📌

Examples:

- "To investigate the impact of daily exercise on anxiety levels in teenagers."
- "To evaluate the effectiveness of a new teaching method on student performance in math."
- "By April 2020, 100% of patients phoning for an on-the-day appointment reporting symptoms of acute illness will be offered care navigation to the ANP". 📌

A good aim statement is essential for aligning stakeholders, creating urgency, and predicting project success. 📌

ii.

A research proposal's objective statement is a clear, concise, and actionable declaration that outlines what the study intends to accomplish, defining the specific goals, scope, and direction of the research. It typically appears in the introduction, breaking down the broad research aim into measurable, SMART (Specific, Measurable, Achievable, Relevant, Time-bound) goals. 📌

Key Aspects of Objective Statements:

- **Purpose:** They guide the study design, methodology, and scope, ensuring the research remains focused and organized.
- **Structure:** Objectives often use action verbs to clearly define the work to be carried out (e.g., "to identify," "to compare," "to analyze").
- **SMART Criteria:** Objectives must be Specific, Measurable, Achievable, Relevant, and Time-bound.
- **Components:** They outline the subject matter, target audience, and time frame. 📌

Examples:

- **Aim:** To investigate student use of e-books.
- **Objective:** To review the literature on student use of e-books in academic libraries. 📌

A well-defined objective statement helps in determining the required sample size and research methodology. 📌

iii.

Project Proposal Content	Level 4	Level 3	Level 2	Level 1	Criterion Score
Project description	20 points Describe the aims and objectives clearly and accurately, showing a comprehensive understanding of the problem to work with	18 points Describe the aims and objectives adequately in detail and accuracy, showing a good understanding of the problem to work with, but some misunderstanding of some minor details	16 points The problem definition is somewhat confusing, suggesting inaccurate understanding of the problem	14 points The problem definition does not make sense, critical miscommunication occurred	/ 20
Background and significance of the problem, where background means the motivation, state-of-the-art work and the significance means the value (e.g., applications) of the work	20 points Demonstrated profound research and understanding the background and significance of the project	17.33 points Demonstrated sufficient research and understanding the background and significance of the project	14.67 points Demonstrated fair research and understanding the background and significance of the project	12 points Demonstrated very little research and understanding the background and significance of the project	/ 20
Top three challenges of the project	10 points Clearly all identified the critical issues of the project	9 points Identified some critical issues of the project, but missed some points	8 points Identified some issues of the project, but not the main one	7 points Unclear what is the challenge of the problem, or problem is not challenging at all	/ 10
Main approaches and strategies	10 points Describe a clear path to address the problem	9 points The approaches and strategies make sense, but are questionable	8 points The approaches and strategies barely make sense	7 points The approaches and strategies do not make sense at all	/ 10

Jan 27, 2026 | 📅 BAT498 - Senior Capstone

Attendees:

Jessica Xavier

Notes

- Finalized topic
- Started on gathering Data

Action items

- ☒ ~~Download and start sorting 2024 data~~

- ☒ ~~Start google sheets for 2024~~
- ☒ ~~Start google sheets for 2014~~
- ☒ ~~Find presentation template~~
- ☒ ~~Start Presentation~~

Attendees:

Jessica Xavier

Notes

-

Action items

- ☒ ~~Define clear objective~~
- ☒ ~~Propose a hypothesis.~~
- ☒ ~~Identify industry/jobs from us bureau labor statistics for hypothesis and analysis.~~

Healthcare

Mix of direct care and production

1. **Hospitals (NAICS 622)**
Direct patient care, high labor intensity, low automation tolerance.
 2. **Medical Equipment & Supplies Manufacturing (NAICS 3391)**
Capital-intensive manufacturing tied to healthcare demand.
-

Hands-On Labor

Physical, trade, and field work

1. **Construction (NAICS 23)**
Skilled and semi-skilled manual labor, slow automation adoption.
 2. **Machinery Manufacturing (NAICS 333)**
Factory labor, maintenance, fabrication, and assembly work.
-

Education

Actual education services, not just support industries

1. **Elementary and Secondary Schools (NAICS 6111)**
Public and private K-12 instruction.
 2. **Colleges, Universities, and Professional Schools (NAICS 6113)**
Higher education, research, and instruction roles.
-

Administration

Clerical, office, and organizational labor

1. **Administrative and Support Services (NAICS 561)**
Includes office administration, call centers, staffing, back-office work.
 2. **Management of Companies and Enterprises (NAICS 55)**
Corporate admin, HR, finance, coordination roles.
-

IT / Tech

Core technology production and services

1. **Computer Systems Design and Related Services (NAICS 5415)**
Software development, IT consulting, systems integration.
2. **Software Publishers (NAICS 5132)**
Product-based tech companies, high AI exposure.

Project Design

Project Proposal Content	Level 4	Level 3	Level 2	Level 1	Criterion Score
Flow chart and conceptual framework of the project	20 points Understanding the problem in great detail, well assessing the technical challenges and solving the problems conceptually via appropriate framework, and dividing the components and relationships clearly	18 points The understanding of the project and division of the work are reasonable but there are minor concerns, such as minor caveats in the frameworks	16 points Lack of deep understanding of the project, or the division of the work is not in detail, lacking of components, or missing links	14 points Very few understanding to the project and the division of the work and description of the relationships do not help to work out a solution	/ 20
Gannt chart and critical paths (component) of the project	20 points The gannt chart is clear and reasonable	17.33 points The grantt chart is roughly reasonable, but there are minor problems (dependency between work components not shown in timeline)	14.67 points The gannt chart lack of details, not reasonable, unable to predict the real timeline of the implementation	12 points The gannt chart is problematic and not reasonable, help little for the implementation of the project	/ 20
Software tools/models to be used	10 points Critical computing and/or statistical tools have been investigated and integrated and knowledges to the tools have been demonstrated	9 points Critical tools have been identified, but with missing tools, or lacking of deep understanding to the tools	8 points Little knowledge about the critical tools although names are listed	7 points Critical tools are not identified	/ 10
Preliminary results and feasibility	10 points Promising results showing the feasibility and chance of success, analytic skills well demonstrated	9 points Preliminary results have been shown, but unable to show the feasibility of the approach	8 points Preliminary results are provided but not meaningful and convincing	7 points Preliminary results are missing or neglectable	/ 10

The final outcome should be a few graphs/charts.

1 shows employment level difference between 2014-24

same but AI implementation level changes

Oracle's Massive 30,000 Layoff As AI Spending Surges

<https://www.forbes.com/sites/jonmarkman/2026/04/06/oracles-massive-30000-layoff-as-ai-spending-surges/>

McKinsey Graphs

Reported use of AI in at least one business function continues to increase.

Use of AI by respondents' organizations, % of respondents

Organizations that use AI in at least 1 business function¹

Phase of AI use among organizations using AI in 2025

¹In 2017, the definition for AI use was using AI in a core part of the organization's business or at scale. In 2018–19, the definition was embedding at least 1 AI capability in business processes or products. From 2020, the definition was that the organization has adopted AI in at least 1 function, and in 2025, the definition was regular use of AI in at least 1 function.

Source: McKinsey Global Surveys on the state of AI, 2017–25

*Includes respondents who answered "scaling" and "fully scaled." Question was asked only of respondents who reported regular use of AI in the respective functions and was rebased to reflect the total sample. In technology, n = 237; insurance, n = 80; healthcare, n = 129; media and telecommunications, n = 93; energy and materials, n = 141; advanced manufacturing (includes advanced electronics, aerospace, automotive and assembly, and semiconductors), n = 118; professional services (includes legal services, management consulting, market research, and product research), n = 259; consumer goods and retail, n = 116; travel, logistics, and infrastructure, n = 75; engineering, construction, and building materials, n = 77; banking and other financial institutions, n = 153; pharmaceuticals and medical products, n = 78. Source: McKinsey Global Survey on the state of AI, 1,993 participants at all levels of the organization, June 25–July 29, 2025

High performers are more likely than others to expect their organizations to use AI for enterprise-wide transformative change.

Note: Figures may not sum to 100%, because of rounding.
¹AI high performers are respondents who reported that more than 5% of their organization's EBIT and "significant value" are attributable to the organization's use of AI.
Source: McKinsey Global Survey on the state of AI, 1,993 participants at all levels of the organization, June 25–July 29, 2025

No more than 10 percent of respondents report scaling AI agents in any individual function.

Phase of AI agent use at respondents' organizations, by business function,¹ % of respondents (n = 1,933)

Note: Figures may not sum to 100%, because of rounding.
¹Question was asked only of respondents who reported regular use of AI in the respective functions and was rebased to reflect the total sample.
Source: McKinsey Global Survey on the state of AI, 1,993 participants at all levels of the organization, June 25–July 29, 2025

Respondents most often cite benefits from AI in innovation, employee and customer satisfaction, and competitive differentiation.

Extent to which AI use has affected organizational measures over the past year,¹

% of respondents (n = 1,753)

Note: Figures may not sum to 100%, because of rounding.

¹Asked only of respondents who said their organizations regularly use AI in at least 1 business function.

Source: McKinsey Global Survey on the state of AI, 1,993 participants at all levels of the organization, June 25–July 29, 2025

Respondents most commonly report cost benefits from AI activities in software engineering, manufacturing, and IT.

Cost decrease within business units from AI use, past 12 months, by function,¹ % of respondents

Anthropic graphs

Use graphs at the bottom

New job starts among workers age 22-25 in occupations with high and no AI exposure

Figure 7: New job starts among workers age 22-25 in occupations with high observed exposure and no AI exposure, Current Population Survey

The top panel shows the percent of young workers starting new jobs in high vs. no exposure occupations. The bottom panel measures the gap between these two series in a difference-in-differences framework.

How people are using Claude

 Click a tile to drill into more granular data

Group by job ☒ Group by category

Categorized using O*NET-SOC codes

Percentages represent the share of Claude.ai conversations associated with each task or group of tasks. Graphic shows what people do with Claude, not their job titles. Percentages don't sum to 100% because we impose privacy filters.

Theoretical capability and observed usage by occupational category

Most exposed occupations

Occupation	Observed exposure	Leading automated task
Computer programmers	74.5%	Write, update, and maintain software programs
Customer service representatives	70.1%	Confer with customers to provide info, take orders, handle complaints
Data entry keyers	67.1%	Read source documents and enter data into systems
Medical record specialists	66.7%	Compile, abstract, and code patient data
Market research analysts and marketing specialists	64.8%	Prepare reports of findings, illustrating data graphically and translating complex findings into written text
Sales representatives, wholesale and manufacturing, except technical and scientific products	62.8%	Contact customers to demonstrate products and solicit orders
Financial and investment analysts	57.2%	Inform investment decisions by analyzing financial information to forecast business, industry, or economic conditions
Software quality assurance analysts and testers	51.9%	Modify software to correct errors or improve performance
Information security analysts	48.6%	Perform risk assessments and test data processing security
Computer user support specialists	46.8%	Answer user inquiries regarding computer software or hardware operation to resolve problems

BLS projected employment growth from 2024–2034 vs. AI exposure

Fed Reserve graphs

- “This suggests that early AI usage in the U.S. may be skewed toward more cognitive or analytical work, rather than commoditized services.”

Scope	Source	Date	Unit of Analysis	Estimation Type	Estimate (%)
AI	BTOS	Dec. 2025	Firms	Firm-weighted percentage	18
	SBU	Nov. 2025	Firms	Employment-weighted percentage	78
GenAI/LLMs	RPS	Nov. 2025	Individuals	Share of labor force	41
	SBU	Nov. 2025	Firms	Employment-weighted percentage	54

Pew Research Graphs

A majority of Americans say they interact with AI at least several times a week

% who say they interact with artificial intelligence (AI) ...

Gallup Data

These are some of the more important bits from the article

!!: This disruption appears closely tied to changes in workforce composition. Employees in AI-adopting organizations are more likely to report both expansions and reductions. Compared with employees in organizations that have not implemented AI, they more often say that their organization is hiring new people and expanding the size of its workforce (34% vs. 28%) or letting people go and reducing the size of its workforce (23% vs. 16%).

The staffing pattern by AI use is different among the largest organizations. Employees in AI-adopting organizations of 10,000 or more are slightly more likely to report reductions in workforce size (33%) than expansion (30%). This contrasts with organizations of 10,000 or more that have not adopted AI. In these organizations, 36% report hiring and expanding their workforce compared with 23% reporting reductions.

AI Users Report Productivity Gains but Rarely Transformational Changes to Work

Within organizations implementing AI, 65% of employees say artificial intelligence has improved their productivity and efficiency, regardless of how often they personally use AI. Sixteen percent say the effect has been extremely positive, while fewer than one in 10 say AI has had a negative impact on their work.

Data

- Add comparative trendline of workforce population for comparison
- We attempted to run an analysis through R studio. We ran into some issues with downloading the appropriate packages and opening the excel files to be read. After working with the professor for some time on how to rectify the issue, we were given permission to utilize Codex to run the analysis of the data. Sam was the first to upload the six completed excel spreadsheets per job sector. His original prompt, “[INSERT PROMPT]”. This first resulted in a spreadsheet that primarily summarized the job trends
